EDUCATION

Mapua Malayan Colleges Laguna (MMCL)

Expected: 2026

Bachelor of Science in Information Technology

- Dean's Lister — 1st Term, 1st to 3rd Year

TECHNICAL SKILLS

Programming Languages: Python, C#, C++, PHP, Dart, HTML, JavaScript, CSS

Backend Development: REST API Integration, CRUD Operations, JSON Handling, Client-Server Communication, Authentication and Encryption

Database Management: MySQL, Oracle SQL, Table Relationships and Normalization, Foreign Keys and Constraints, Triggers, Stored Procedures

Frameworks and Platforms: Flutter, React, Node.js

Tools and Version Control: Git, GitHub, Visual Studio, VS Code, XAMPP

PROJECTS

SapPIIre — Secured Autofill System | Stack: Dart, Flutter, HTML, MySQL | *Ongoing*

- Developed backend infrastructure for a mobile application that uses QR codes to securely store and transmit user PII to online forms.
- Built a backend authentication system with encrypted password storage to protect sensitive user data.
- Designed and structured a relational database for storing and managing user PII with proper security constraints.
- Implemented QR-triggered PII transfer from the mobile application to a live web session.

CCIS House Attendance Tracker of 2024 | Stack: HTML, JavaScript, CSS, React, Node.js, Oracle SQL | *August 12, 2024*

- Developed a web application management system for processing CCIS student records during CCIS Week 2024.
- Built the API layer connecting the Attendance database to the web application with full CRUD functionality.
- Managed student attendance, student list, and player list modules.
- Implemented a population chart accurately displaying the number of members per house.

PokedexCards | Stack: C#, PHP, XAMPP | *July 19, 2024*

- Built a mobile application that tracks and displays a user's Pokemon card collection.
- Connected the mobile frontend to a backend, implementing REST API calls to fetch, get, and post card data.
- Developed filtering by rarity and set, and search functionality for Pokemon cards.
- Designed the backend database structure for card storage using PHP and XAMPP.

Personify (TwitterCloneAPI) | Stack: HTML, JavaScript, CSS, Node.js, REST API, JSON | *February 12, 2024*

- Developed a Twitter clone themed around 'Persona', utilizing a REST API for all core social features.
- Implemented sign-up, login, tweet posting, liking, and following functionalities via API calls.
- Collaborated using GitHub for version control and team-based development workflow.
- Data stored and retrieved via JSON, simulating real-world client-server communication.

DiceHard | Stack: C# | *January 20, 2024*

- Built a dice-based roguelike game where movement, attacks, and skills are determined by dice rolls, emphasizing resource management and strategic gameplay.
- Developed player and enemy stat systems, skill mechanics, and the core gameplay loop in C#.
- Implemented game logic inspired by resource management mechanics from various RPG titles.

ACHIEVEMENTS AND CERTIFICATIONS

Honors

- Hackathon 1st Place — ConnectMe, Mapua Malayan Colleges Laguna
- Dean's Lister — 1st Term, 1st to 3rd Year, Mapua Malayan Colleges Laguna

Certifications

- TOEIC — Score: 805 / 990
- CCNA: Introduction to Networks — Cisco Networking Academy
- Ethical Hacking Certification
- CompTIA Tech+ Series
- Python Programming — CodeChum
- Google Cloud Skill Boost — Infrastructure, Security, Data, Machine Learning, and App Development
- Blockchain Fundamentals — Certificate of Participation

INTERESTS

Backend Architecture | Secure Data Systems | Database Design | Mobile-to-Web Integration | Open-Source Collaboration
